Professional Summary

Results-driven Data Engineer with 2+ years of hands-on experience designing scalable ETL pipelines on Azure and Databricks. Expert in Medallion Architecture, PySpark, Delta Lake, and data quality initiatives that accelerate analytics and ML workflows. Proven track record of reducing processing time by 30%+ and improving data reliability for enterprise analytics.

Education

- **Sir Padampat Singhania University** — Udaipur, India
  B.Tech Computer Science and Engineering — *Aug 2019 – Jul 2023*

Technical Skills

- **Data Engineering:** ETL/ELT Pipelines, Medallion Architecture, Delta Lake, Data Orchestration, Data Quality, Data Migration
- **Cloud & Big Data:** Azure (Data Lake, Databricks, Data Factory), PySpark, Spark SQL
- **Programming & Querying:** Python, PySpark, SQL (Advanced), Data Validation
- **Databases:** MySQL, PostgreSQL, Snowflake
- **Tools:** Git, Databricks Jobs/Notebooks, Trello, Slack, Azure DevOps

Experience

- **Tudip Digital** — Pune, Maharashtra
  Data Engineer — *Nov 2023 – Present*
  - Led design and implementation of **Medallion Architecture (Bronze→Silver→Gold)** across enterprise analytics, improving data trustworthiness by 40% and reducing downstream data prep time by 25 hours/week
  - Built and optimized **PySpark ETL pipelines** on Azure Data Lake + Databricks, processing 500GB+/week with 35% faster job runtimes and 20% lower compute costs through Spark tuning
  - Automated end-to-end **data orchestration** using Databricks Jobs & Notebooks, cutting manual operational effort by 15 hours/week and enabling 24/7 pipeline reliability
  - Implemented comprehensive **data validation, cleaning, and transformation** processes, achieving 99.5% data accuracy for BI reporting and ML model training
  - Executed **large-scale data migration** from Snowflake to Databricks (2TB+), ensuring zero-downtime transfer with optimized Delta Lake storage formats

Key Projects

- **Databricks Data Engineering Platform** — Azure, PySpark, Databricks, ETL
  Led end-to-end implementation — *Nov 2023 – Present*
  - Architected **Medallion Architecture** processing 1TB+/day across Bronze→Silver→Gold layers, enabling analytics-ready datasets for 10+ downstream teams
  - Optimized PySpark pipelines using advanced Spark techniques, reducing ETL runtime from 8hrs to 3hrs (62% improvement)
  - Automated data quality monitoring with Delta Lake expectations, achieving 99.8% data reliability SLA
- **Brightside E-Learning Platform Migration** — Azure Data Lake, PySpark, Snowflake
  Database migration & ETL modernization — *Jan 2024 – Apr 2024*
  - Migrated 1.5TB on-premise SQL databases to **Azure Data Lake** with zero downtime using incremental sync patterns
  - Built production-grade **PySpark ETL pipelines** in Databricks, reducing data processing time from 12hrs to 4hrs (67% improvement)
  - Implemented **data deduplication & validation**, improving reporting accuracy from 92% to 99.2%

Certifications

Databricks Certified Data Engineer Professional 2024
HackerRank SQL (Intermediate) 2023

Awards & Achievements

- Awarded **First Prize** for outstanding technical paper on "Optimizing PySpark ETL Pipelines for Enterprise Scale" at Tudip Digital Tech Symposium 2024
